Daniel Metz, MD, FAAOS Orthopedic Care

“I believe in meeting a patient’s individual needs by utilizing a comprehensive evaluation along with a detailed treatment plan that is designed to achieve an active, pain-free lifestyle. I combine leading edge techniques with proven traditional methods to provide my patients with the best orthopedic care possible.

Patients should be encouraged to help guide and direct diagnosis and treatment activities; I feel developing a partnership with my patients allows them to better understand their unique condition, treatment choices and the recovery process. I make sure patients are well informed and I try to explain every step of the diagnostic process so they make the best decisions about their health care.”
